

## Central Line Associated Blood Stream Infection **CLABSI Prevention Bundle**

### Timely Removal

- Review qualifying indicator every shift

### Prevent Cross-Contamination

- Clean gloves when touching line
- Daily bath (includes wiping tubing)
- Patient hand hygiene

### Needleless Connectors

- Routine replacement with every tubing set change, dressing change, disconnection or if visible blood

### SwabCaps

- Unused Y-sites and needleless connectors (including peripheral line sites)
- 15-second scrub of the hub

### IV Tubing

- Blue cap on end of unused tubing
- Do not loop back IV tubing

### Line Patency

- Avoid blood draws
- Cathflo on sluggish ports or if no blood return

### Dressing Remains Clean, Dry and Intact

- Change gauze in 24 hours
- Change CHG disc if saturated and with dressing change
- Change dressing PRN if damp, visibly soiled or not intact

### Routine Dressing Changes

- 2-person dressing change
- Every Wednesday
- Infusaports (and Huber needle) every 7 days
