

What is MemorialSENSOR?

MemorialSENSOR is a confidential electronic event reporting system. As part of our culture of safety, we encourage the reporting of all patient safety events. SENSOR facilitates the timely investigation, provides a mechanism for tracking and trending, and helps to identify opportunities to improve patient safety. It can also be used to recognize a “good catch” made by a colleague, student or faculty member.

What is a patient safety event?

An unintended or unexpected event that either could or did cause patient harm. Patient safety events included:

Unsafe conditions – circumstances that could lead to an error but did not reach the patient (unlabeled specimen)

Near misses – events that could cause harm but DID NOT reach the patient because of a “good catch” (wrong dose of medication detected by BBMA)

Adverse events – events that reach the patient and cause harm (fall with injury)

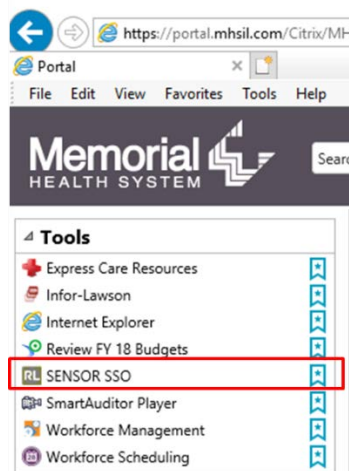

What types of events can be reported in SENSOR?

- Adverse Drug Reaction
- Airway Management
- Blood Product
- Diagnosis/Treatment
- Diagnostic Imaging
- Equipment/Medical Device
- Facility
- Falls
- Infection
- IV/Vascular Access Device
- Lab/Specimen
- Line/Tube
- Maternal/Childbirth
- Medication/Fluid
- Patient ID/Documentation/Consent
- Professional Conduct
- Provision of Care
- Safety/Security
- Skin/Tissue
- Surgery/Procedure
- Workplace Violence

How do you submit an event?

MemorialSENSOR can be access via Citrix, MemorialCentral or Cerner Millenium PowerChart
