

## Catheter-Associated Urinary Tract Infection **CAUTI Prevention Bundle**

### **Timely Removal**

Review qualifying indicator every shift

### **2-Person Insertion**

Second person monitors and helps maintain sterility

### **Catheter Care**

From umbilicus to knees every 12 hours and after stooling  
Wipe off 12 inches of tubing with soap and water

### **Unobstructed Urine Flow**

No clamping, no dependent loops (use green clips), and keep drainage bag below level of the bladder

### **Maintain Closed System**

Do not disconnect catheter from drain bag (keep red tape intact) unless medically necessary

### **Do Not Routinely Change indwelling catheters**

### **Stabilize Catheter against leg using Statlock or leg strap**
